<https://magento.stackexchange.com/questions/227093/how-to-get-customer-session-id-in-magento-2>

```
.minicart-wrapper.active .block-minicart{  
Position:absolute:  
}
```

Middle set navigation:

```
<move element="top.search"  
destination="header.panel"/>  
        <!-- <move element="store.menu"  
destination="header.container" after="logo" /> -->  
        <!-- use to navigation menu in middle logo  
and cart -->  
        <move element="store.menu"  
destination="header-wrapper" after="logo"/>  
        <container name="header.actions"  
htmlTag="div" htmlClass="header-actions"/>  
        <move element="header.actions"  
destination="header-wrapper" after="store.menu"/>  
        <move element="minicart"  
destination="header.actions" after="store.menu"/>  
        <!-- use to navigation menu in middle logo  
and cart on code →
```

call block in phtml file:

```
<?php  
namespace Company\Helloworld\Block;  
use Magento\Framework\View\Element\Template;
```

```
class Main extends Template  
{  
    public function getMyCustomMethod()
```

```

        {
            return '<b>I Am From MyCustomMethod</b>';
        }
    }
}

```

then in any phtml file you can use following code to get method of this block.

```

<?php
$blockObj=
$block->getLayout()->createBlock('Company\Helloworld\B
lock\Main');
echo $blockObj->getMyCustomMethod();
?>

```

```

-----
//get data for variable in array
//echo '<pre>';
print_r($_productCollection->getData());
foreach ($_productCollection as $key => $value) {
    print_r($value->getEntityId());
    echo "<br/>";
}
//echo "</pre>";
//exit();
-----

```

```

<?php
$array = array('foo', 'bar');
    // foreach ($array as $k => $item) {
    //     echo "$item\n";
    //     if (!$k) {
    //         $array[1] = 'baz';
    //     }
    // }

```

```
$array = array('foo', 'bar');  
foreach ($array as $k => &$item) {  
    echo "$item\n";  
    if (!$k) {  
        $array[1] = 'baz';  
    }  
}  
?>
